

Professional Summary

Dedicated and results-driven DevOps Engineer with 2+ years of hands-on experience in streamlining CI/CD pipelines, managing AWS cloud infrastructure, and supporting containerized microservices. Seeking a challenging role to leverage DevOps and cloud expertise in a dynamic team.

Technical Skills

Cloud Technologies: AWS

Build Tools: Maven

Container Technologies: Docker, Kubernetes, Helm

Scripting: Shell, Python

Version Control: Git, GitHub, GitLab

Configuration Management: Ansible

Infrastructure as Code: Terraform

CI/CD: GitHub Actions, Jenkins, Argo CD

Monitoring: Prometheus, Grafana, CloudWatch

DevSecOps: SAST (SonarQube), DAST (OWASP ZAP), Trivy

Professional Experience

EXL Services – DevOps Engineer

Client: Thames Water (UK Water Utility Industry)

April 2024 – Present

- Streamlined CI/CD pipelines for enterprise applications using Maven, achieving significant improvements in build and deployment efficiency.
- Strong experience in containerizing microservices architecture supporting business-critical applications and development teams.
- Supported Kubernetes adoption, contributing to improved infrastructure utilization and operational efficiency.
- Implemented Infrastructure as Code for application and Kubernetes infrastructure on AWS.
- Hands-on experience with AWS and AWS networking, including VPC, Load Balancing, Compute, and IAM.
- Introduced Git best practices, improving collaboration and traceability; assisted teams with branching strategies and webhook configuration.
- Helped development teams with Kubernetes onboarding and proof-of-concept implementations.
- Conducted knowledge-sharing sessions on CI/CD pipelines, Kubernetes, and automation for team members.
- Resolved critical production incidents, ensuring system availability and minimizing business impact.
- Received commendation for resolving critical AWS networking and connectivity issues affecting application environments.
- Worked with Route53 and Hosted Zones, integrating Route53 with ALB for custom domains in Kubernetes.
- Implemented Kubernetes Ingress for multiple microservices and application workloads.
- Set up Terraform remote backend and state locking using AWS S3 and DynamoDB.
- Managed Terraform remote state for multiple development teams and environments.

- Used AI tools to assist with automation, troubleshooting, and documentation in DevOps workflows.
-

Technical Writing & Blogging

- Received the Star of the Month award for achieving a 20% infrastructure cost reduction through Terraform automation and Kubernetes optimization.
 - Collaborated with the developer and DevOps community through technical discussions, knowledge sharing sessions, and cloud-native best practice presentations.
 - Certified DevOps Professional – Oracle Cloud Infrastructure (OCI)
-

Education

Bachelor of Computer Applications (BCA – Computer Science)

Arcade Business College 2020 –2023
